

NSK

Create it 

NSK, as a market leader in high quality handpieces and equipment, is proud to sponsor the BSP. Within our periodontal range we specialise in the removal of tartar and biofilm around and below the gingiva together with tooth cleaning and polishing. This significantly improves the results of dental treatments.

NSK supports your daily clinical practice, with effective and comfortable to use professional oral care equipment, such as our powder therapy and ultrasonic treatments device the Varios Combi Pro <https://www.uk.nsk-dental.com/products/oral-hygiene/oral-vcp/>. With its broad range of tips and powder therapy options, it can be used across the key treatments steps for periodontitis.

NSK is proud of its customer support and service. We carry a large UK stock holding, and continue to offer a UK based repair workshop along with a localised support network of eleven Product Specialists and two Engineers, providing product trials, demonstrations and after sales care - <https://mynsk.co.uk/product-specialists/>
